| Energy performance certificate (EPC) | | | | | |
|---|-------------------|--|--|--|--|
| 9, Manor Farm Close Litton Cheney DORCHESTER DT2 9TE | Energy rating | Valid until: 24 October 2029 Certificate number: 0665-2869-7186-9521-3145 | | | |
| Property type | End-terrace house | | | | |
| Total floor area | 99 square metres | | | | |

Rules on letting this property

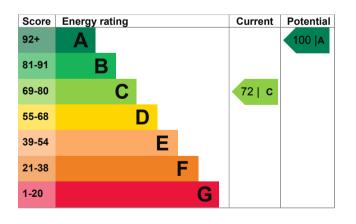

Properties can be rented if they have an energy rating from A to E.

If the property is rated F or G, it cannot be let, unless an exemption has been registered. You can read guidance for landlords on the regulations and exemptions (https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-guidance).

Energy efficiency rating for this property

This property's current energy rating is C. It has the potential to be A.

<u>See how to improve this property's energy</u> performance.

The graph shows this property's current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher the number the lower your fuel bills are likely to be.

For properties in England and Wales:

the average energy rating is D the average energy score is 60

Breakdown of property's energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says "assumed", it means that the feature could not be inspected and an assumption has been made based on the property's age and type.

| Feature | Description | Rating |
|----------------------|---|-----------|
| Wall | Cavity wall, filled cavity | Very good |
| Roof | Pitched, 100 mm loft insulation | Average |
| Window | Fully double glazed | Good |
| Main heating | Electric storage heaters | Average |
| Main heating control | Manual charge control | Poor |
| Hot water | Electric immersion, off-peak | Average |
| Lighting | Low energy lighting in 46% of fixed outlets | Good |
| Floor | Solid, insulated (assumed) | N/A |
| Secondary heating | Room heaters, coal | N/A |

Low and zero carbon energy sources

Low and zero carbon energy sources release very little or no CO2. Installing these sources may help reduce energy bills as well as cutting carbon emissions. The following low or zero carbon energy sources are installed in this property:

Solar photovoltaics

Primary energy use

The primary energy use for this property per year is 203 kilowatt hours per square metre (kWh/m2).

Environmental impact of this property

One of the biggest contributors to climate change is carbon dioxide (CO2). The energy used for heating, lighting and power in our homes produces over a quarter of the UK's CO2 emissions.

| An average household produces | 6 tonnes of CO2 | |
|-------------------------------|-------------------|--|
| This property produces | 3.7 tonnes of CO2 | |

This property's potential 0.4 tonnes of CO2 production

By making the <u>recommended changes</u>, you could reduce this property's CO2 emissions by 3.3 tonnes per year. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

How to improve this property's energy performance

Making any of the recommended changes will improve this property's energy efficiency.

If you make all of the recommended changes, this will improve the property's energy rating and score from C (72) to A (100).

| Recommendation | Typical installation cost | Typical yearly saving |
|--|---------------------------|-----------------------|
| 1. Increase loft insulation to 270 mm | £100 - £350 | £46 |
| 2. Low energy lighting | £35 | £30 |
| 3. High heat retention storage heaters | £2,000 - £3,000 | £64 |
| 4. Solar water heating | £4,000 - £6,000 | £85 |
| 5. Wind turbine | £15,000 - £25,000 | £569 |

Paying for energy improvements

Find energy grants and ways to save energy in your home. (https://www.gov.uk/improve-energy-efficiency)

| Estimated energy use and potential savings | | Heating a property usually makes up the majority of energy costs. | |
|---|------|--|--|
| Estimated yearly energy cost for this property | £724 | Estimated energy us Space heating | ed to heat this property 6375 kWh per year |
| Potential saving | £225 | Water heating | 2233 kWh per year |
| The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property. | | Potential energy savings by installing insulation Type of insulation Amount of energy saved | |
| The estimated saving is based on making all of the recommendations in <u>how to improve this</u> <u>property's energy performance</u> . For advice on how to reduce your energy bills visit <u>Simple Energy Advice</u> (<u>https://www.simpleenergyadvice.org.uk/</u>). Heating use in this property | | Loft insulation709 kWh per yearYou might be able to receive Renewable HeatIncentive payments (https://www.gov.uk/domestic- renewable-heat-incentive). This will help to reduce carbon emissions by replacing your existing heating system with one that generates renewable heat. The estimated energy required for space and water heating will form the basis of the payments. | |

Contacting the assessor and accreditation scheme

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
